Full Stack Software Engineer

Full stack software engineer dedicated to providing empathetic online experiences. With experience in Ruby on Rails, JavaScript, and React and a background in theater and customer service, I discovered software engineering while searching for a way to balance my scientific background with my career in the arts. I bring strong skills in teamwork and project management that will aid tech companies in solving problems creatively and effectively. I work well with people from vastly different backgrounds, and have come to value the differences each person brings to the table. I am immensely passionate and I love learning new things. Additionally, my background as an actor and director provides me with a valuable alternative perspective and equips me with the skills to work efficiently under high pressure and time-sensitive circumstances.

WORK EXPERIENCE

Freelance Web Developer, New York, NY | Full Stack Web Developer - Freelance May 2023 - Present

- Served as Webmaster for the annual Shakespeare's Birthday Sonnet Slam, maintaining and updating a full stack Ruby on Rails application used to manage yearly event registration.
 - Assumed the role of primary developer responsible for an existing full stack application
 - Collaborated with the Creator and Producer to quickly implement UI changes in HAML and SCSS
 - Persisted user data year-to-year using MySQL
 - Managed deployments using Heroku
- Revamped the onboarding flow for Celebrities Unlimited, building an entirely new frontend in React.
- Provided freelance web development services, building and designing personal websites in React and Gatsby.
- Tutored students with zero coding experience through their first projects with Crimson Education.

Church Pension Group, New York, NY | Software Developer I - Full Time January 2021 - May 2023

- Participated in frequent pair programming sessions to ensure team growth and knowledge transfer
- Extracted existing display logic from a Rails application into SQL queries, and assisted in transferring to a separate team to implement into new API, reducing complexity of the original application
- Worked with business and product teams to ensure the above aligned with expected behavior
- Provided input into revamping the agile workflow to optimize the writing and delivery of tickets
- Converted full stack Rails application to pure API, to be consumed by a third party vendor
- Acted as Release Manager for large scale multiple application overhaul, creating a release plan and coordinating live manual deployments across multiple teams and vendors
- Wrote end to end tests for front end applications using capybara, phantomjs, and apparition
- Created integration and unit tests to increase application test coverage

Church Pension Group, New York, NY | Software Engineer - Contractor July 2020 - January 2021

- Rewrote existing Ruby on Rails front end in React, including Redux state management, allowing for a seamless transition to an efficient and performative client experience
- Developed across 10+ full stack applications including full stack Ruby on Rails, Rails APIs, and React front ends
- Wrote new and updated existing RSpec test suites and for new features added into existing applications
- Collaborated with QA and UAT teams to establish requirements and identify and remove bugs in new features prior to release
- Attended daily stand ups and participated in an Agile sprint cycle in order to complete work effectively and efficiently
- Worked across multiple teams and disciplines utilizing clear and effective communication to ensure expectations were set effectively and met accurately
- Wrote clear and effective documentation describing application SQL queries
